Telephone: 087-2734769

The purpose of AgriGuardian is to protect the most vulnerable farm goers. Agriculture accounts for over 50% of all workplace fatalities in Ireland but only has 5% of the workforce. Of those fatalities children and over 65's account for 53% .

How to videos can be found on the AgriGuardian YouTube channel and also videos are available that explain how each feature works.

Below is a quick set up and user guide

1. To start, the AgriGuardian application needs to be installed on both the Guardian (Parent) and Protected user (Child) devices. The app can be found on both the Google Play Store and Apple App store by searching AgriGuardian. Look out for the below logo

AgriGuardian
AgriGuardian

2. Once downloaded please login using the credentials you have been provided with on each device.
3. AgriGuardian has three main features which can be accessed at the top of the home screen.

Alertzones – Zones can be drawn around areas on your farm and designated safe or dangerous. For example safe zone around the back garden, danger zone where the slurry pit is located. Different users can be added to each zone. As many Zones as required can be drawn and schedules around their active time can added also. In the map screen you can select to view the area as Satellite (photo) or various terrain options. In the top right corner, tap Layers icon  to switch views.

Proximity Warning – Once enabled by a Guardian if a selected protected user comes within Bluetooth Range your device will sound.

Anchoring – Activate this feature when a Child is within Bluetooth range. If they leave Bluetooth range of your device you will be alerted.

Both GPS and Bluetooth needs to be enabled and permissions to run in the background at all times need to be granted for the features to operate correctly.
